

## Good & bad things about the INTERNET.

Good things about the internet are:

playing games, it's easier to complete our work, find a lot more information, watching movies or television, downloading music and many other cool things...

However,

The bad things are:

cyber bullying, computer viruses, getting bad eyes because of playing games too much, meeting bad people, and hacking etc...

- Staying safe involves being careful and not giving out your name, address, mobile phone number, school name or password to people online.
- Meeting someone you have contacted on the Internet can be dangerous. Only do so with your parents/carers permission, and when they can be present.
- **Accepting e-mails or opening files from people you don't really know or trust can get you into trouble - they may contain viruses or nasty messages.**
- Tell your parent or career if someone or something makes you feel uncomfortable or worried.

Keep the Internet safe and be happy!

# Internet safety

Computers are important and provide us with a lot of information.

However, sometimes computers harms us like germs. We will sort out what the dangers are and what to do about them. You will find out right now! Turn to the next page.

information for your brain!
